

Smiths Detection HazMatID 360 Upgrade

HazMatID360

Description

The HazMatID 360 is an upgraded version of previously fielded legacy HazMatID's. The system utilizes Fourier-Transform Infrared Spectroscopy (FT-IR) to detect and identify solid and liquid threats. The upgrade to the currently fielded HazMatID modernizes the processor and software to the HazMatID 360, which is the current commercially available version.

Mission

Special Purpose CBRNE Units have currently fielded and authorized legacy HazMatID units which are outdated and require hardware and software updates to remain mission ready. The advantage to upgrading legacy FTIR devices to the HazMatID360 will be a more complete, accurate, and timely detection and identification of chemical threats, increasing the value of response units in any Consequence Management (CM) incident.
